com JUnit

ANDERSON DE SOUZA ALVES

Senior Software Engineer | Backend | Microservices | Java | Batch
processing

Brasília, Federal District, Brazil

Summary

During my 15+ years of experience in Analysis, Design, and Software Implementation using Java technology (Desktop and WEB), I have been involved in numerous projects in both public and private organizations. As an experienced Java developer, I have extensive knowledge of Java versions 8, 11, and 17, as well as the Spring ecosystem, including Spring, Quarkus, JPA, and hibernate is complemented by my knowledge in frontend development, particularly with AngularJs and React.js. My expertise in integrating various technologies and tools, such as Docker, Junit, and TDD, enables me to develop and maintain high-quality and efficient applications.

I am committed to continuous learning and improvement, staying up-to-date with the latest trends and best practices in software development. I excel in collaborating effectively in multidisciplinary teams, communicating clearly, and presenting complex solutions in an accessible manner. My approach to problem-solving emphasizes adaptability, critical thinking, and a relentless pursuit of excellence and innovation. I am known for my inspiring leadership, capable of motivating teams and driving innovation.

My ability to balance technical expertise with strong interpersonal skills makes me a valuable asset to any team.

Main Technologies: Java | Spring Boot | EJB | JPA | Hibernate |
React.js | Kotlin | Jboss | AWS | Docker | Kubernetes | Rancher |
Openshift | Jenkins | GitLab | JUnit | Mockito | Jacoco | Cucumber |
Selenium | SonarQube | Kafka | Microservices | Rest API | MVC | GoF
| SOLID | Clean Architecture | Hexagonal | Systems Design | C4Model
| Domain Driven Design | Oracle | MySQL | PostgreSQL

| MongoDB | NoSQL | MariaDB | REDIS | Prometheus | Grafana |
Kibana | ElasticSearch

Experience

Exadel(MetLife) - Full-Time

Senior Software Engineer

November 2024 - Present (7 months) São Paulo, Brazil

As a Senior Software Engineer with extensive experience in the financial services sector, specializing in Java(Kotlin) code migration and database transitions from Sybase to Oracle.

Key highlights of my work include:

- * Java Code Migration: Leading the migration of legacy Java applications to Oracle, ensuring compatibility and optimizing performance.
- * Technical Leadership: Collaborating with cross-functional teams to implement solutions that meet regulatory requirements.
- * Performance Optimization: Enhancing application efficiency through analysis and fine-tuning of database interactions. Implemented performance tuning strategies that enhanced database interaction efficiency, leading to a 40% increase in overall system responsiveness.
- * Problem Solving: Resolving complex technical issues to ensure high availability and reliability of financial applications.

AM53 Smart Solutions - Full-Time

Software Engineer

June 2024 - April 2025 (11 months) São Paulo, Brazil

As a software engineer, I specialize in maintaining and monitoring middleware applications for acquisition systems, focusing on onboarding, clearing, service fee management, and accounting processes. Leveraging my expertise in Java and Spring Boot development, I emphasize batch processing and messaging integration using RabbitMQ. My role centers on optimizing workflows and ensuring seamless operational efficiency.

ACHIEVEMENTS:

- * Datadog for monitoring application and server performance, allowing for the configuration of alerts and the creation of customized dashboards that

provide real-time insights. My data analysis skills help me identify bottlenecks and implement proactive improvements, ensuring application availability and performance.

* With a strong ability to collaborate within teams and a focus on results, I continuously seek to improve processes, always aiming for the best cost-benefit relationship for the company and its clients.

Convergência(STF) - Full-Time

Senior Full-stack Developer

April 2022 - May 2024 (2 years 2 months) Brasília, Federal District, Brazil

As a Full-stack Developer, I have developed and delivered innovative solutions to the unique challenges faced by government agencies. Leveraging my expertise in conceptual and logical diagrams, data models, domain models, use case journeys, and roadmaps to design and implement secure, scalable, and efficient systems. My experience spans areas such as data management, citizen engagement platforms, and internal government processes.

Developed applications with a backend in Java and a frontend in Angular, providing an integrated and dynamic user experience.

ACHIEVEMENTS: * Led the successful migration of the Judiciary's regulatory legal acts legacy data platform to Elasticsearch. This innovative migration improved data accessibility, enhanced search capabilities, and laid the foundation for future scalability and advanced analytics. This resulted in a 20% reduction in query response times and a 45% increase in data search volume. * Migrating outdated Java framework applications to Angular, Spring Boot framework, GitLab actions, and kubernetes in order to upgrade the technological environment and enhance user experience.

Java Development (v.8 - v.17) - Spring Framework - Redis- Keycloak - AngularJS & Angular - React.js - Oracle Database - Software Architecture - ElasticSearch - PostgreSQL - Amazon Web Services (AWS) -Microsoft Azure - Integration - Batch Processing - Web Services

NTT DATA(Bradesco) - Full-Time

Software Engineer

October 2021 - April 2022 (7 months) São Paulo, Brazil

I oversee the full software development lifecycle for REST-based microservices, with a focus on modernizing legacy infrastructure. My expertise includes architecture design, library maintenance, POC development, and CI/CD pipelines using Jenkins, GIT, and Docker.

- * Worked on the creation of microservices to modularize and scale the system's functionalities, promoting a more flexible and efficient architecture.
- * Conducted unit testing using JUnit and Mockito, ensuring the reliability and robustness of the developed code.

ACHIEVEMENTS:

- * Led the successful migration of a core banking platform to a scalable microservices architecture, resulting in 20% faster deployments and 15% cost reduction.
- * Migrated critical functionalities like account management and transaction processing to high-performing, independently deployable microservices.
- * Reduced average response time by 30% within 6 months by implementing a CDN strategy for static content.
- * Increased operational efficiency by 15% through the development of a real-time data analytics module.

Java 11 · Object-Oriented Programming (OOP) · Scalable Architecture · Troubleshooting · Spring Framework · REST APIs · Git · Docker · Amazon Web Services (AWS) · Jenkins · Databases · Spring Boot

CTIS Tecnologia(BACEN) - Full-Time Software Developer

September 2020 - October 2021 (1 year 2 months) Brasília, Distrito Federal, Brasil

Maintenance, evolution and monitoring of the DICT platform, PIX arrangement (Bacen), as well as participation in architectural strategic planning and development of new features.

Some Technologies / Methodologies used:

- * Kafka, Par Programming, Functional Programming, BDD, TDD, CI/CD, Spring Boot, Docker, Kubernetes

ACHIEVEMENTS: Tuning queries performance around 35% using Elasticsearch.

ECGE - Consultoria e Gestão Empresarial Systems Java Analyst

February 2015 - September 2020 (5 years 8 months)

Architectural design and implementation of desktop applications (POS) using JavaFX and Spring technology. Migration of the legacy monolithic system (ERP) to the micro services approach, using technology based on Spring Boot and Docker containers. Other technologies:

- * Jenkins for build automation;
- * Unit tests of components;
- * Code quality assessment (Configuration and Change Management);

ACHIEVEMENTS: Increase app performance by 25% using Redis cache to store/retrieved frequently users accessed data.

Mirante Tecnologia(Sicoob) - Full-Time System Analyst and Java Developer

November 2012 - February 2015 (2 years 4 months) Implementation of the management, development and maintenance of credit risk limit system for members of cooperatives and financial institutions SICOOB Confederation, JavaEE / Flex technologies.

Fóton - Full-Time Lead Software Engineer

November 2010 - August 2012 (1 year 10 months) • Java Tech Lead
• Implementation Management / Configuration and project changes to Financial Institutions.
• Development and maintenance of automation banks system, Java / Swing language. Maintenance of corporate systems developed in Java J2EE platform.

Cast Informática(Bank of Brazil) - Full-Time System Analyst

August 2010 - March 2011 (8 months) Maintenance and customization of the portal Internet Banking Bank of Brazil, developed on the J2EE

Link Data - Full-Time Analyst and Java Developer March 2010 - August 2010 (6 months)

Maintenance and customization of Web ASI tool (Integrated Solution for Public Management)

warehouse module and shopping developed on the J2EE platform.

Politec - Full-Time

Full System Analyst

2007 - 2009 (2 years) Successful development and pilot project implementation , with new

technologies, to the Supreme Court . The project was challenging because in addition to the business rules are complex and are constantly changing , the initial delivery and the development team remained had to be allocated to the customer , making the software specification , updating documentation and implementing artifacts almost the same time. Finally , the application was delivered on time and the team was rewarded for his efforts.

- Architecture, design and implementation of applications using MVC frameworks JSF and Spring / JPA.
 - Design and Implementation of Design Pattern (MVC) for PHP systems.
 - Modeling and Management Systems Implementation for MRE(Ministry of Foreign Affairs) using the Framework designed.
 - System Implementation BB Sisouvidor in Java and Struts Framework.
- Maintenance of legacy systems in Visual Basic and DBMS SQLServer as well as support for technical decisions on changes to be made.

Poliedro(INEP) - Full-Time

Software Developer - INEP

2006 - 2007 (1 year) Survey and analysis requirements of the systems:

Censo2007 and CensoWeb (Java).

- Developing and maintaining applications in the languages PHP and Delphi with Oracle DBMS Postgres and using technologies like Ajax, prototype and design patterns O.O with MVC.
- projects Participation as: IDEB (Development Index of Brazilian Education), 2006 and Enade Newsletter INEP.

Education

Universidade Paulista

UNIP, Engenharia de Software · (2006 - 2009)
